

E360: THE SMART RESIDENTIAL METER FOR THE IOT ERA

E360 Benefits at a glance

Flexibility provided by the unique modular and integrated design. Adjustable functionality in the changing regulatory, technology and business environment; headroom for future grid edge intelligence use cases.

End-to-end security in design, production, installation and operations. Guaranteed with E2E data encryption, configurable role-based access and certifications according to the highest industry standards. Fully GDPR compliant.

Enhanced measurement capabilities with “Smart Push functionality” for near real time data. Superior accuracy and innovative power quality functionality.

Less installation effort due to better building penetration of communication technology.

Dependable connectivity through LTE CAT M1 & NB1 in one device ensures reachability due higher range and better building penetration. Smart meters in basements can be reached easier than with other cellular comms technologies.

Optimized Total Cost of Ownership due to lower communication costs: Less resource allocation in a cellular network and lower power consumption of the cellular modem.

A Gridstream® Connect intelligent endpoint

IDIS compliant. Designed and manufactured in an ISO 9001, 14000, 45001 and 27001 certified environment.
